

BYK-W 940 SG

Wetting and dispersing additive for mineral fillers in unsaturated resin systems and adhesives. The additive prevents the flooding/floating and settling of pigments and fillers in epoxy and VE/UP-based laminates. Reduction in the flooding/floating of colored pigments in gel coats.

Product data

Composition

Solution of an unsaturated polycarboxylic acid polymer with a polysiloxane copolymer

Typical properties

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Density (20 °C): 0.95 g/ml Non-volatile matter (10 min, 150 °C): 50 % Flash point: 28 °C Refractive index (20 °C): 1.486

Acid value: 150 mg KOH/g

Storage and transportation

Separation or turbidity may occur during storage and transportation. Warm to 30-60 °C and mix well.

Applications

Thermosets

Special features and benefits

BYK-W 940 SG is a wetting and dispersing additive for mineral fillers as well as inorganic and organic pigments. It stabilizes the solid particles in resin systems and prevents the settling of fillers and the flooding/floating of pigments. BYK-W 940 SG is primarily used in color pastes and gel coats based on unsaturated polyester resins.

BYK-W 940 SG prevents the settling of pigments and fillers in VE/UP-based formulations for pultrusion applications.

Data sheet Issue 08/2023

Recommended levels

Amount of additive (as supplied) based upon solids:

Inorganic pigments: 0.5–3 % Organic pigments: 2.5–5 % Fillers: 0.5–1.5 %

The above recommended levels can be used for orientation. The optimum dosage should be determined by application-related test series.

Incorporation and processing instructions

For optimum performance, the additive should be added before the solids.

Adhesives and sealants

Special features and benefits

BYK-W 940 SG is a wetting and dispersing additive for mineral fillers as well as inorganic and organic pigments. It stabilizes the solid particles in adhesive systems and prevents the settling of fillers and the flooding/floating of pigments. BYK-W 940 SG is recommended for use in epoxy-based and polyester-based adhesive systems. It contains a polysiloxane copolymer to reduce flooding/floating.

Recommended levels

Amount of additive (as supplied) based upon solids:

Inorganic pigments: 0.5–3 % Organic pigments: 2.5–5 % Fillers: 0.5–1.5 %

The above recommended levels can be used for orientation. The optimum dosage should be determined by application-related test series.

Incorporation and processing instructions

For optimum performance, the additive should be added before the solids.
